FUNCTION: CALCIUM/CALMODULIN-DEPENDENT ENZYME RESPONSIBLE FOR THE PUNCTION: CALCIUM/CALMODULIN-DEPENDENT ENZYME RESPONSIBLE FOR SMOOTH MUSCLE COMTRACTION VIA PHOSPHORYLATION OF A SPECIFIC SERINE SMOOTH MUSCLE COMTROL LIGHT CHAINS (MLC), AN EVERT THAT IN THE N-TERMINUS OF MYOSIN LIGHT CHAINS (MLC), AN EVERT THAT FACILITATES MYOSIN INTERACTION WITH ACTIN FILAMENTS. CENTRAL DETERMINANT IN THE NERVOUS SYSTEM IT HAS BEEN SHOWN TO EDEMA FORMATION. IN THE NERVOUS SYSTEM IT HAS BEEN SHOWN TO CONTROL THE GROWTH INTIATION OF ASTROCYTIC PROCESSES IN CULTURE AND TO PARTICIPATE IN TRANSMITTER RELEASE AT SYNAPSES FORMED BETWEEN CULTURED SYMPATHETIC GANGLION CELLS. CRITICAL PARTICIPANT IN SIGNALING SEQUENCES THAT RESULT IN FIBROBLAST APOPTOSIS.

-1- CATALYTIC ACTIVITY: ATP + [myosin light-chain] = ADP + [myosin light-chain]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        splicing and polymorphic marker.";

SUBSCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
TISSUE SPECIFICITY: RESTRICTED TO THE NERVOUS SYSTEM.
DEVELOPMENTAL STAGE: INCREASES DURING DEVELOPMENT FROM VERY LOW
LEVELS AT EMBRYONIC DAY 10 AND IS MOST ABUNDANT AFTER HATCHING.
SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFRAMILY. IGLON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SIMILARITY: CONTAINS 3 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAINS

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: HIGHLY EXPRESSED IN LUNG, LIVER, PANCREAS, KIDNEY, PLACENTA AND MELANOCYTES. WEAKLY EXPRESSED IN THYROID GLAND, OVARY, BRAIN, HEART AND SKELETAL MUSCLE. ALSO EXPRESSED IN ERYTHROLEUKEMIA CELLS. BUT NOT EXPRESSED IN COLON.

SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. INSULIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               601890;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBCELLULAR LOCATION: Type I membrane protein.
ALTERNATIVE PRODUCTS: 2 ISOFORMS; CD22-ALPHA AND CD22-BETA (SHOWN HERB); ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: B-LYMPHOCYTES.
SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.
SIMILARITY: CONTAINS 6 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAINS.
SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE V-TYPE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      L16928; AAA02562.1; -.

CI FUNCTION MAY BE INVOLVED AS A REGULATORY PROTEIN IN THE TRANSTION OF UNDIFFERENTIATED PROLIFERATING CELLS TO THEIR CELLS TO THEIR SUBCELLULAR LOCATION: Type I membrane protein.

CI SUBCELLULAR LOCATION: Type I membrane protein.

CI SUBCELLULAR LOCATION: TRETINA, EXPRESSED ON GANGLION CELL FIBERS

CI AS SOON AS THEY BEGIN TO EXTEND THEIR AXONS.

CI SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. DCC

SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
cc seminal vesicle hyperplasia in transgenic mice overexpressing B7-L CC seminal vesicle hyperplasia in transgenic mice overexpressing B7-L CC cancer including seminal vesicle cancer, lung, brain, breast, ovarian, CC pathway can be manipulated to regulate cytotoxic T-lymphocyte response CC in allograft transplantation, graft versus host disease, T-cell CC diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid CC purpura and psoriasis, chronic inflammatory disease such as systemic CC are also useful for alleviating the symptoms associated with CC are also useful as immunosuppressive agents for bone marrow and organ CC are also useful for diagnosis and treatment of diseases involving and treatment of diseases involving abnormal cell constiteration, including arterioscies and vascular restenosis. CC are also useful for diagnosis and treatment of diseases involving abnormal cell constiteration, including arterioscies and vascular restenosis. CC shock syndrome or allosensitisation due to blood transfusions, and for cephropathies (e.g. glomerulonephritis), was useful for alleviation of toxic comphropathies (e.g. glomerulonephritis), various pneumopathies cC lymphoproliferative disorders such as multiple myeloma. The present xx

The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and delivery and endometriosis and delivery and endometriosis and delivery and endometriosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for enhancing the immune response to tumours. (\hat{1}) plays a regrewth and maintenance of cancer cells based on the observation of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ωy
                                                                                             seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimune diseases. B7-L
                   molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic
purpura and psoriasis, chronic inflammatory
                                                                                                                                                                                                                                                               proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a rol growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                          conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) an
                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide related disease, disorders of the polypeptide related disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for diagnosing, preventing and treating reproductive, immu proliferative disorders, e.g. cancer and arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 13; Fig 1; 135pp; English.

They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restemosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treatment of allergy, asthma and hypersensitivity reactions, treatment of allergy, asthma and hypersensitivity reactions, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of human B7-L_h1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The polypeptide, polynucleotide encoding it and antibody against () useful for treating B7-like polypeptide-related disease, disorders conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (AMGE-) AMGEN INC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New B7-like polypeptides, polynucleotides and their modulators, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; ABK13030
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2002-130881/17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Welcher AA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer and cancers of haematopoletic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell in allograft transplantation, graft versus host disease, T-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 13; Fig 3; 135pp; English.
                                       Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, rephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigold), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of human B7-L_h3.
                                                                                                                                                                                                                                                                    are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restenosis.
                                                                                                                                                                                                                                                                                                                                                                      arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis) Grave's disease, Hashimoto's thyroiditis and diabetes mellitus.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ъ
          The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polypucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of
seminal vesicle hyperplasia in transgenic mice overexpressing
                                                                                                                                                                                       Claim 13; Fig 4; 135pp; English.
                                                                                                                                                                                                              New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis
